## MIG Paste

---

**Mig-Paste** has been formulated for the heavy duty environments of the welding and industrial engineering industry.

**Mig-Paste** is applied to "Mig" type welding nozzles to prevent the adhesion of spatter. Until now, the answer to this application problem has been 'Anti-Spatter' sprays, but these have not been successful 'time savers' and require reapplication every 10-15 welds with cleaning. In such a competitive industry time is important.

**Mig Paste** is applied to the nozzles and tips of the hand piece by dipping the hand piece into the Mig-Paste; heat generated by the welding process melts the Mig-Paste and it forms an internal and external coating on the nozzle and tip. Now the welder can weld more than 30 welds before any further reapplication is required. Under normal operating conditions the tip and nozzle need only be cleaned every hour.

**Mig-Paste** will also prevent the wear of those welding components by reducing the scraping and scratching involved in cleaning tips and nozzles. Mig-Paste will significantly reduce 'welding-spatter' which makes finishing of completed work so much easier.

**Mig-Paste** is easily removed from metal surfaces when contact occurs, this may be uncommon but Mig-Paste is paintable and will present no problem for painting or powder coating processes. Mig-Paste contains no silicones, is non-toxic and food grade.

### Packaging: 500g tin

**Conditions of Sale:** Chem Pack Pty Ltd shall not be liable for any loss, injury, damage or death, whether consequential or otherwise whatsoever or howsoever arising whether through negligence or otherwise in connection with the sales, supply, use or application of this product. The supply of this product is on the express condition that the purchaser does not rely on Chem Pack's skill or judgement in purchasing or using the same and every person dealing with this product does so at his own risk absolutely. No representative of Chem Pack has any authority to add to or alter these conditions.
