ANTI-SPATTER SPRAY

Chemlube Paintable ANTI-SPATTER is the welders' friend! It is an all-purpose guard against welding spatter adhering to metal in unwanted places during the welding process. It can also be applied to the nozzle of MIG welders to prevent unwanted spatter sticking to the nozzle.

Chemlube Anti-Spatter will not cause undue problems with adhesion of paints or other surface finishes when applied to the welded metal parts.

Application Instructions:

Surfaces to be treated should be clean. Hold the can about 30cm from surface and spray liberally. Avoid allowing over-spray to contaminate other surfaces. As with all paint surface preparation, a light solvent wipe-down with a suitable solvent before applying metal primer is recommended.

Pack Sizes:

- **400g Aerosol cartons of 12**
- **20 Litres**
